Core Technical Skills

React / Next

JavaScript / TypeScript

HTML & CSS / SCSS

Tailwind / Bootstrap / Shadcn

Web Components

Unit Testing

Node / Express (Basic)

REST / GraphQL API integrations

Scrum / Agile Methods

Soft Skills

Team Leadership

Mentoring & Coaching

Problem-Solving

Critical Thinking

Continuous Learning &

Improvement

Taulant Sela

Software Engineer | Front-End Specialist | Expertise in React & Next.js | Exploring Express & Node.js

Struga, North Macedonia

Summary

Curious Software Engineer who doesn't just build features—I dive deep to understand the product, users, and systems that make everything work.

With a Master's in Software Engineering, my experience spans data science and AI to scalable web and mobile applications, with expertise rooted in frontend development and a growing focus on full-stack capabilities. I've maintained complex legacy codebases while architecting new solutions that prioritize performance and long-term maintainability.

Currently exploring Next.js and fascinated by how it unifies frontend and backend development. I thrive in Agile environments where clean architecture meets collaborative problem-solving, always looking to build solutions that are functional, thoughtful, and lasting. I'm passionate about creating intuitive interfaces and scalable systems. Whether it's optimizing React state management or designing user-centered experiences, I bring curiosity and technical depth to every project.

Always excited to discuss innovative projects and meaningful challenges—let's connect!

Experience

Hoyo Tech

Software Engineer

September 2020 – Present

Struga, North Macedonia

Technical Team Lead & Mentor -> Leading and mentoring junior developers and interns, providing technical guidance and career development.

Collaborated with management to implement best practices, optimize workflows, and establish coding standards that improved team productivity and code quality.

Valtech - Frontend Developer -> (November 2021 – March 2026) full-time Frontend Developer specializing in large-scale e-commerce platforms.

- Goodyear -> Modernized AEM-based multi-brand B2C platform across 30+ European markets. Migrated legacy React codebase to TypeScript, Redux Toolkit, and Tailwind CSS, maintaining AEM integration and updating UI components for reuse and maintainability.
- BMG -> Contributed to migrating BMG Production Music catalog and licensing platform from Angular 8 to Next.js 15 with React 19, rebuilding catalog browsing and track preview features, implementing server-side rendering, and integrating with Contentful CMS and Harvest services.

HoyoHome -> Leading development of as Scrum Master, applying Agile methodologies to deliver a comprehensive smart home automation platform enabling remote control of IoT devices with scheduling, voice control, and personalized scene management.

Parkber - Parking management system -> Built a comprehensive parking management dashboard using React with Redux for managing different users, roles, organizations, and facilities. Developed monitoring and administrative tools that streamlined parking operations and management workflows, with focus on user experience and operational efficiency.

Stepline - Document Template Management System -> Developed a comprehensive document template management platform using Angular and RxJs services architecture for advocates across different organizations and cantons in Switzerland. Built tools for creating, customizing, and managing legal and official document templates, streamlining legal documentation processes with focus on UX, automatization and operational efficiency.

Valtech

Frontend Engineer

November 2021 - March 2026 (4 years 5 months)

Skopje, North Macedonia

- **Goodyear**

Worked on Goodyear's B2C platform, supporting multiple brands including Goodyear, Dunlop, and retail shops such as Premio, Vulco, and SuperService, across 30+ countries. The platform runs on Adobe Experience Manager (AEM) using Chameleon architecture, supporting multiple tire business units (consumer, commercial, motorcycle) with distinct features and workflows.

- Maintained and extended a legacy React (JavaScript) codebase using Class Components, HOCs, custom CSS, and Redux for state management
- Integrated React components into AEM using Web Components (customElements) for CMS compatibility
- Contributed to the migration toward a modern stack by:
 - Rewriting components with Functional Components, Hooks, and TypeScript
 - Introducing Redux Toolkit (RTK Query) for improved state and API management
 - Adopting Tailwind CSS for consistent utility-first styling
- Contributed to frontend architecture improvements, component reuse and cross-brand theming across TBUs
- Built components with Storybook for documentation, testing and development workflows
- Consumed REST APIs and GraphQL endpoints
- Implemented unit tests using Enzyme and React Testing Library to ensure reliable component behaviour

- **BMG**

- Contributed to the migration from Angular 8 to a modern Next.js frontend,
- rebuilding existing features while improving maintainability and performance
- Implemented server-side rendering and optimized data fetching for efficient
- catalog browsing and track preview flows
- Built reusable React components and modernized legacy UI patterns
- Integrated frontend with Contentful CMS for content management and Harvest services for licensing and catalog data

MonoChain

Software Developer

July 2020 - April 2021

Pristina, Kosovo

Developing different internal cross-platform products like:

- Web Applications: MC Index, MC Excess, MC Certify -> React (Mainly Class Components)
- Mobile Application: DIEM (now Twig) -> React Native (Mainly Functional Components)
- Static Pages (Landing Page): MonoChain, Monold -> Next.js
 - Small backend responsibilities (Microservices architecture) -> NodeJS (Express), MongoDB, Elasticsearch, Redis, RabbitMQ, Docker (Kubernetes)

Every product follows similar architecture, design, state-management style etc.

Other libraries/tools/technologies used: Redux, Hooks, Tailwind, Material UI, Expo etc.

Inspire11

Data Scientist

September 2018 - August 2019

Tetovo, North Macedonia

- ETL processing using SSIS, Matillion
- Data Warehousing using Snowflake
- Data Visualization using Tableau

South East European University (SEEU)

Tetovo, North Macedonia

Computer Lab Assistant

April 2018 - June 2018

Teaching assistant for the following courses: Programming (1&2), Operating Systems, Computer Architecture & Databases

Assistant Webmaster

December 2017 - May 2018

- PR Department
- Webmaster assistant

IT Support Technician

September 2017 - October 2017

Monitoring and maintaining the computer systems and networks

Marseco

Frontend Developer

October 2017 - December 2017

Tetovo, North Macedonia

Small responsibilities for the development of Marseco's platforms and contributing in cross-team design process

Xhumkar Computers

IT Support Technician

June 2017 - August 2017

Struga, North Macedonia

Installing and configuring computer systems & fixing and repairing of different problems

Education

South East European University (SEEU)

Master of Science - MS, Computer Software Engineering · (2018 - 2020)

South East European University (SEEU)

Bachelor of Science - BS, Computer Science · (2015 - 2018)

SOU Niko Nestor

High School Diploma, Medicine · (2010 - 2014)
